1 Pre-Check

Please verify you have the latest version of Java installed: <http://www.java.com/>

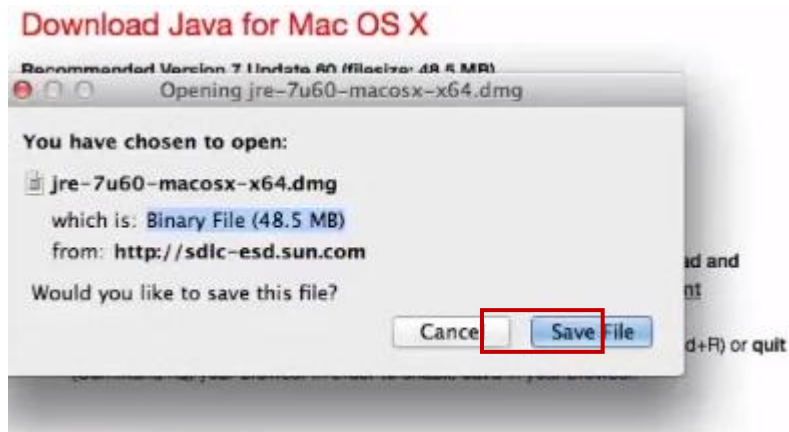

Download Java for Mac OS X

Recommended Version 7 Update 60 (filesize: 48.5 MB)

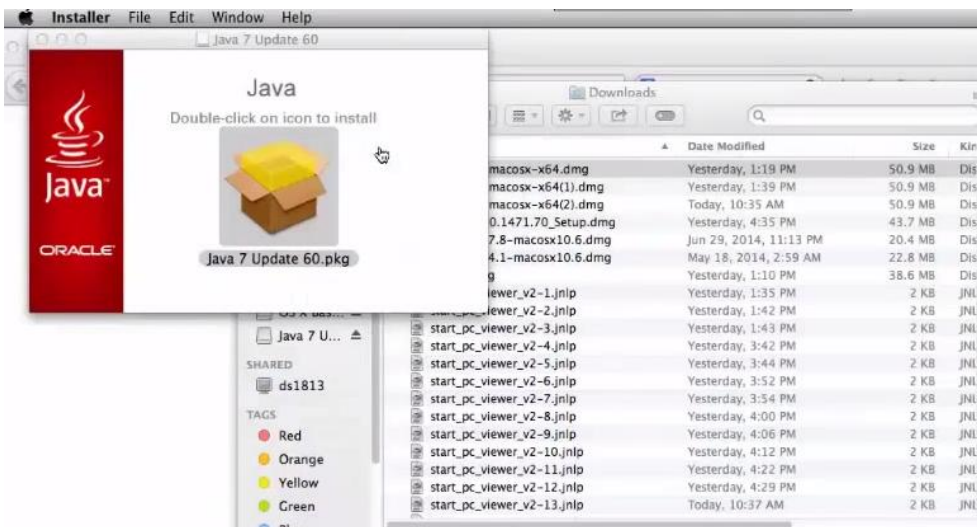

Agree and Start Free
Download

By downloading Java you acknowledge that you have read and
accepted the terms of the [end user license agreement](#)

1. Click **Agree and Start Free Download**.

2. When the pop-up window appears, press **Save File**.
3. Locate the Java file you just downloaded and then open the file.
4. Double-click on the icon in the window to begin installation.

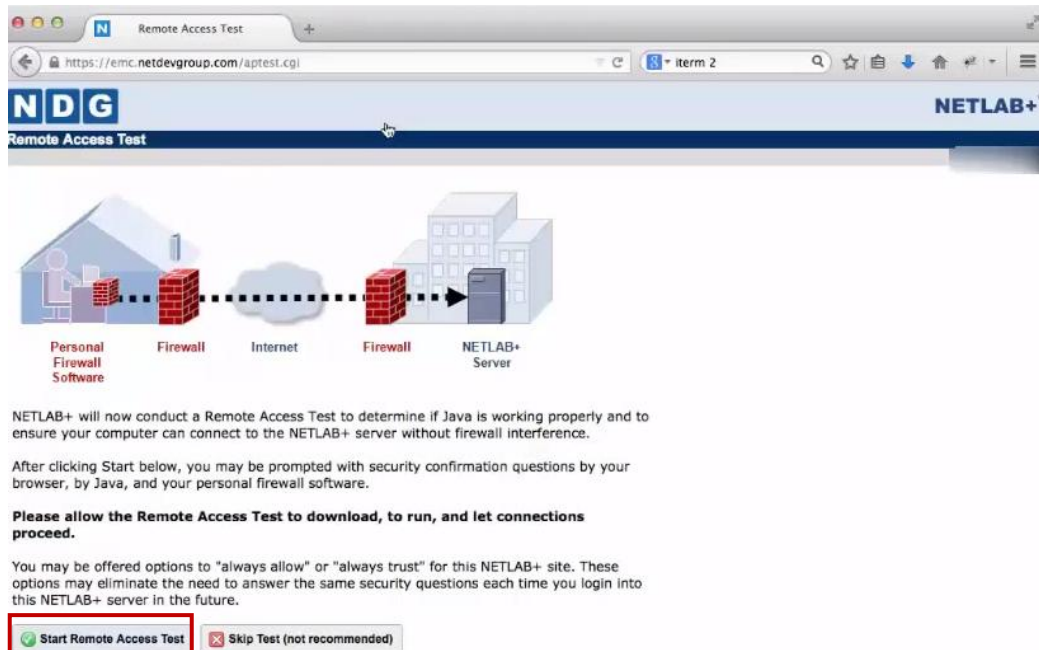

5. Choose where you wish to install Java, then click **Install**.

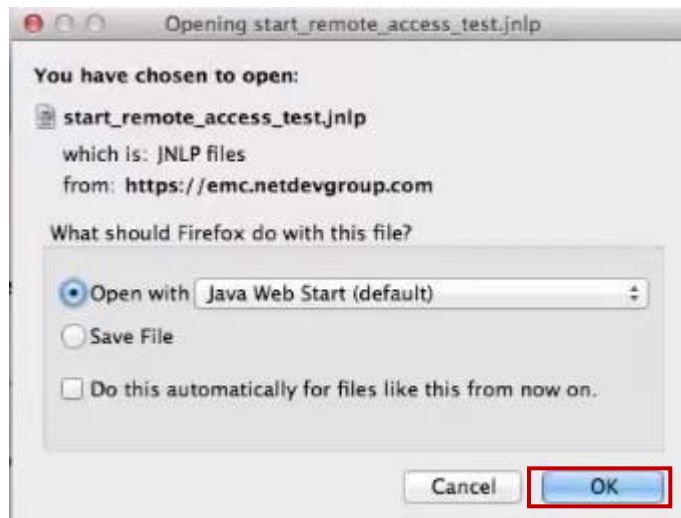

6. On Java's website, verify your Java version once the installation is complete.

2 Accessing Labs and Adjusting Security

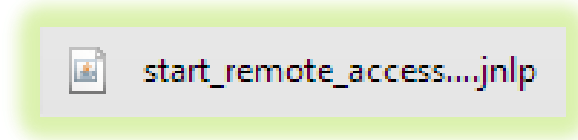

1. Go to the URL where your online labs are located.
Example: emc.netdevgroup.com
2. After you log in, you will need to run the Remote Access Test. This will verify your system is configured properly to use NETLAB+.

3. Opening the Java app download (Mozilla Firefox - Choice a, Google Chrome - Choice b).
 - a. When using **Mozilla Firefox**, a pop-up will appear, asking what you would like to do with the Java app. Click **OK** to accept the default.

- b. Or, if you are using **Google Chrome**, the download will appear at the bottom. Click on the download file and execute the Java app, then click **Run**.

4. You should receive another pop-up warning you of security settings.
 - a. You will need to go into **System Preferences > Security & Privacy** to give the application permission to run.
 - b. Once you get into **Security & Privacy**, you may then close the security pop up.
 - c. You will see an **Open Anyway** button under the **General** section. Click **Open Anyway** to run the application.
