

The NDG Linux Unhatched course eases learners into Linux knowledge, in an environment that allows them to gain skills through hands-on practice.

WHY LEARN LINUX?

- Linux is everywhere! Linux is used by web servers, personal computers, mobile devices, and more.
- Linux is operating system software that is found in many areas of IT, including cloud technology, virtualization, cybersecurity, and networking.
- Linux is an open source product. Open source technology skills are in high-demand in today's job market.
- Linux skills are needed for many IT professional tracks, and knowledge of basic Linux commands is often a prerequisite for popular IT certification programs.

The screenshot shows the NDG Linux Unhatched course interface. On the left, there is a 'Content' sidebar with a table of contents for the 'Listing Files' lesson, with section 5 highlighted. The main content area shows the lesson title 'Listing Files' and a blue button with a list icon. Below this, there is text explaining the 'ls' command and a code block showing the command 'ls' and its output: 'Desktop Documents Downloads Music Pictures Pu'. On the right, there is a terminal window titled '>_ Ubuntu PC' showing the Ubuntu login screen and a terminal session with two users: 'root' and 'sysadmin', both with the password 'netlab123'. A 'Toggle onscreen keyboard' button is visible at the bottom of the terminal window.
