VMware Cloud Foundation

Since it began in 1998, VMware has been revolutionizing the IT industry, first by virtualizing servers and more recently by virtualizing networking and storage. But they're not stopping there. They want to take it one step further by allowing us to virtualize what our IT systems currently do within the four walls of our offices and migrate it all into the cloud. How? With VMware Cloud Foundation, a set of products that make it easy for anyone with the right hardware to move their existing system to a virtual data center. (In Section 5 The Virtual Data Center, we mentioned that a virtual data center and a software-defined data center - or SDDC - are the same thing.)
